

ANT MASK:

Fun fact: Ants are tiny "clean-up crews"! They can carry bits of food and other litter back to their nests, helping break down some waste. But too much litter, especially plastic can harm ants, contaminate their food and damage their habitats. So, even though ants are great recyclers, litter can make life much harder for them!

SPIDER MASK:

We need spiders because they eat insects and help keep our ecosystems balanced. Litter can harm spiders by damaging their habitats and getting tangled in their webs.

LADYBIRD MASK:

Fun fact:
Ladybirds
help protect
plants by
eating tiny
pests, but
litter can
destroy their
homes and
make it
harder for
them to find
food!
